1. Claim 8 is objected to because of the following informalities: The word "morpholine" is misspelled in two places, and the word "dilaurate" is misspelled. Appropriate correction is required.

2. Claims 11-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The method of these claims is directed to copolymerizing the hard and soft segments and then dissolving. In the disclosure and the examples, the hard and soft NCO terminated components are dissolved without copolymerization. The examples show that the NCO groups remain unreacted. Presumably, the copolymerization must take place after exposure to the atmosphere. Further, after copolymerization, the resin would probably be insoluble. The claims should be directed to the invention of the disclosure.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 and 6-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kube.

Kube discloses resins made from 80 wt. % prepolymer and 20 wt. % of isocyanurate (see claim 12). The prepolymer comprises polyester polyols (claim 15) and the diisocyanates of the applicant's claim 3 (see claim 7). In claim 8, he shows the same isocyanurate components as the applicant's claim 2. Kube's examples show adding 0.015 wt. % dibutyltin dilaurate catalyst. In the abstract, he discloses the prepolymer as having 0.16-0.84 moles of NCO groups per kilogram. This would make the mixture of prepolymer and isocyanurate overlap in NCO content with the applicant's claim 6.

4. Claims 4 and 5 are objected to for depending on rejected claims.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel F. Gorr whose telephone number is 571-272-1072. The examiner can normally be reached on Mon., Tues., Thurs., Fri., from 7:00 AM to 5:30 PM.
